

Huebits

Smart Synergies – Smarter Futures

INDUSTRY-READY IOT PROGRAM

**SHAPE YOUR FUTURE WITH COMPREHENSIVE
END-TO-END IOT TRAINING**

www.huebits.in | +91 891 4053 195

Redefining Tech Education for the Future

■ Program Features

- Boot camps
- Full Spectrum Of Each Technology with 30+ courses
- Comprehensive training to prepare students for employment
- Real-world industrial experience
- Guaranteed industrial internship
- Placement opportunities

■ Bootcamps

80+ hours of in-person classroom training or Live sessions

- Boot camp 1: 40 hours
- Boot camp 2: 40 hours

In-depth hands-on sessions with hardware and foundational concepts

Comprehensive Training

■ Foundations of IoT

Dive into the foundational aspects of the Internet of Things (IoT) with this comprehensive group of courses. Begin with an overview of IoT concepts and architectures, followed by hands-on Python programming that will empower you to develop real-world applications. Explore embedded systems using the ESP32 and the versatile Raspberry Pi, learning how to integrate hardware and software for innovative IoT solutions. This foundational knowledge will set the stage for more advanced topics in the IoT ecosystem.

■ Courses

01

Introduction to Internet of Things

02

Python Programming

03

IoT and Embedded Systems with ESP32

04

IoT using Raspberry Pi and Python

Wireless Communication Mastery

Unlock the potential of wireless communication in IoT with this targeted set of courses. Gain hands-on experience with the ESP32, Bluetooth, and BLE, and understand how to establish reliable connections in various environments. Master WiFi communication techniques and explore long-distance options like Cellular, LoRa, and NB-IoT. Finally, dive into the MQTT protocol, an essential component for efficient data exchange in modern IoT systems. This group equips you with the skills to design robust communication frameworks for diverse IoT applications.

Courses

- 01 Master ESP32, Bluetooth, and BLE: Hands-On Projects for IoT Communication
- 02 Mastering WiFi Communication for IoT
- 03 Mastering Long-Distance Wireless Communication: Cellular, LoRa, and NB-IoT
- 04 Mastering MQTT Protocol for Modern IoT Systems

■ Cloud and Full Stack IoT Development

Elevate your IoT development skills with cloud computing and full-stack programming expertise. This group covers certification training for leading cloud platforms, Azure and AWS, enabling you to leverage cloud services for scalable IoT solutions. Complement this knowledge with full-stack development using the MERN (Mongo DB, Express JS, React JS, Node JS) stack, Flask framework and Raspberry Pi, and learn how to create visually engaging, data-driven applications. Additionally, explore Node-RED, a powerful tool for wiring together devices, APIs, and online services, making IoT development faster and more intuitive.

■ Courses

- 01 Azure IoT Certification Training
- 02 AWS IoT Certification Training
- 03 Developing Web Applications for IoT Using Python and JavaScript
- 04 Full Stack IoT Development with JavaScript, MERN Stack, and Raspberry Pi
- 05 Node-RED for IoT Solutions

■ Advanced Data Analytics and AI in IoT

■ Courses

Data Visualization for IoT:
PowerBI, Tableau,
Grafana, and Kibana

Real-Time Analytics with
IoT Data and Kafka

IoT Data Analytics Using
Python

Artificial Intelligence of
Things (IoT + Machine
Learning)

Harness the power of data with this advanced group focused on analytics and artificial intelligence in IoT. Learn how to visualize and interpret IoT data using leading tools like PowerBI, Tableau, and Grafana. Delve into real-time analytics with Kafka, and master data analytics techniques using Python. Explore machine learning applications tailored for IoT environments and discover how to integrate AI into IoT solutions, creating intelligent systems that learn and adapt. This group empowers you to transform raw data into actionable insights, driving innovation in IoT.

Industrial IoT and Edge Computing

Explore the transformative landscape of Industrial IoT and edge computing with this specialized group of courses. Understand the unique challenges and opportunities presented by IoT in industrial settings, and discover MING technologies that enhance connectivity and efficiency. Learn how edge computing enables data processing closer to the source, reducing latency and bandwidth use while improving responsiveness. This group equips you with the knowledge to implement robust IoT solutions tailored for industrial applications, enhancing productivity and operational effectiveness.

Courses

Industrial Internet of Things

MING Technologies in Industrial IoT

Edge Computing

Unlock access to more than 50 IoT-focused courses and 100 hands-on projects, encompassing key topics such as IoT security, embedded systems, machine learning, and generative AI.

■ Hands-On Projects

- 01** | Smart Energy Analytics using IoT and Power BI
- 02** | Real Time Health Monitoring Dashboard using IoT and Google Looker Studio
- 03** | Smart Air Quality Monitoring using ESP32 and Node-Red
- 04** | Smart Waste Management using IoT and ML with ESP32 and AWS
- 05** | Machine Health Monitoring Using Power BI
- 06** | Indoor Occupancy Detection Based on Environmental Data using Tableau
- 07** | Anomaly Detection in the Temperature of an AC Motor Using Embedded Machine Learning
- 08** | AI Voice Assistant using Raspberry Pi and Gen AI
- 09** | Industrial IoT Gateway using Raspberry Pi
- 10** | Smart Car Parking System using ESP32 and Arduino

■ Hands-on Projects

- 11** | Smart Street Lighting using IoT
- 12** | Smart Irrigation System using ESP32
- 13** | Smart Shoe Development using ESP32 and Blynk
- 14** | Smart Shoe for Blind using ESP32 Project
- 15** | Fall Detection System with ESP32 and MPU6050 Sensor
- 16** | Smart Agriculture using Internet of Things and MQTT Protocol (Raspberry Pi)
- 17** | MQTT based Environment Monitoring in factories for Employee Safety (raspberry Pi)
- 18** | Developing Smart Workspace Based IOT with Artificial intelligence and using Telegram CHATBOT
- 19** | Smart Light Bulb Controlling on Raspberry Pi Using Flask Web App
- 20** | Remote Energy Monitoring System with Siemens IoT2040 PLC

Master the IoT Tools and Technologies Shaping the Future

■ Programming and Communication Protocols:

CoAP

MQTT

■ Hardware Development:

■ Device Communication Protocols:

CAN

■ Wireless Communication Technologies:

Master the IoT Tools and Technologies Shaping the Future

Cloud Platforms

Data Analytics and Monitoring

Web and App Development

Data Science, AI, ML

IoT: Capstone Project

Demonstrate your knowledge and skills acquired in the huebits industry ready program in Internet of Things by Designing and Implementing an end-to-end IoT system involving Hardware, Software and Networking elements. In this six week Capstone project, you will be able to design, build and implement a prototype IoT system which encapsulates analysis of environments amenable for IoT implementation by arriving at project goals, various design choices and trade-offs you would make in arriving at practical solutions to real-world problems. During the course of this project, you will have a chance to revisit some topics and reflect on the learnings from previous course modules while you adapt them for your application.

Project Methodology

In this capstone project, you'll have the freedom to creatively define and solve a problem, guided by expert mentors. You will implement a full-stack solution, from hardware setup to cloud integration and application development. Following industry-standard methodologies like Agile, you'll produce key deliverables, including project documentation and test cases. Your final evaluation will include a video presentation showcasing your project, technical skills, and detailed reports. Under the guidance of AI powered CapstoneGPT magic and industry experts, you will follow a six-week structured project plan to:

Review key concepts from past IoT courses and Projects

Begin building a prototype IoT system, making design choices along the way

Receive and reflect upon active feedback from instructors through each stage

Select a project area and adopt a formal development methodology

Present the working prototype to the instructors and submit a technical report

Real Industry Experience

Gain Hands-on Experience with Leading IoT Companies!

At Huebits, we believe in learning through real-world applications. Our platform offers guaranteed internships and industry-driven projects, where you can work directly with Huebits' R&D team or our Industry partners on cutting-edge solutions. Upon completing the learning path, you'll have the opportunity to apply your knowledge to real world problems in emerging technologies, either through paid or unpaid internships.

Industry Exposure: Collaborate with experts and gain insights into real-world challenges.

Internship Opportunities: Paid or free internships depending on performance and project outcomes.

Certifications : Receive formal recognition for your contributions and work.

Unlock Career Opportunities with Tailored Placement Support

Huebits not only provides technical skills but also helps you navigate the path to a successful career. We offer comprehensive placement assistance to ensure you're well-prepared for the job market. Our strong connections with leading IoT companies enable us to connect you to top-tier employers looking for skilled professionals.

Resume & Interview Preparation: Get personalized guidance to perfect your resume and sharpen your interview skills.

Industry Connections: Leverage our extensive network with companies across the IoT industry.

Top IoT Companies: Access opportunities with leading companies in electronics, manufacturing, and technology.

Competitive Packages: We help you secure rewarding positions with excellent salary packages in the IoT sector.

Exit Profile

IoT Developer/Engineer

1

IoT Architect

2

IoT Data Analyst

3

IoT Cloud Engineer

4

IoT Application Developer

5

Edge AI Engineer

6

IoT and Machine Learning Engineer

7

IoT R&D Team at Huebits

At Huebits, our Research & Development (R&D) Team is the driving force behind our cutting-edge IoT solutions. Comprised of experienced engineers, data scientists, and IoT experts, we specialize in areas such as Industrial IoT (IIoT), IoT Analytics, and Smart Manufacturing. Our team works on innovative projects, pushing the boundaries of IoT technology to develop impactful solutions for industries ranging from electronics to automation.

Bapuji Kanaparthi,
Founder, 15+ years of Experience
MTech (IIT Bombay)

Dr. N.B. Samuel,
COO, 15+ years of Experience
PhD (NIT Manipur)

Kamal Kumar,
